

# B.MATIC

## Pedestal TJP

### Description:

The new pedestal for B.MATIC tab inserters has been completely redesigned in order to combine functional principle, sturdiness and aesthetic shape.

- 1 - An heavy steel support ensures a low gravity centre, while the 5 spokes adapt themselves perfectly to the floor surface and 5 rubber feet prevent its sliding
- 2 - Three robust telescopic tubes allow the use of the same pedestal both for low and high pile (40cm to 160cm)
- 3 - The clamps in aluminium, anodized in our typical B.MATIC red shade, ensure a perfect tightening along with rapid height adjustment.
- 4 - A joint-swivelling bracket is fitted on top to allow adjustment and adapting of the equipment even in case of presses with wide side shoulders.
- 5 - It is supplied packed with assembly instructions to be installed in a few minutes.
